THE AUTO SHARPENING DISC BLADE

QUALITY OF CUT IS A KEY FACTOR IN CROP RESIDUE MANAGEMENT. THANKS TO THEIR UNIQUE STEEL STRUCTURE, NIAUX 200 DISC BLADES GET SHARPER AS THEY WEAR

CONVENTIONAL

NIAUX 200

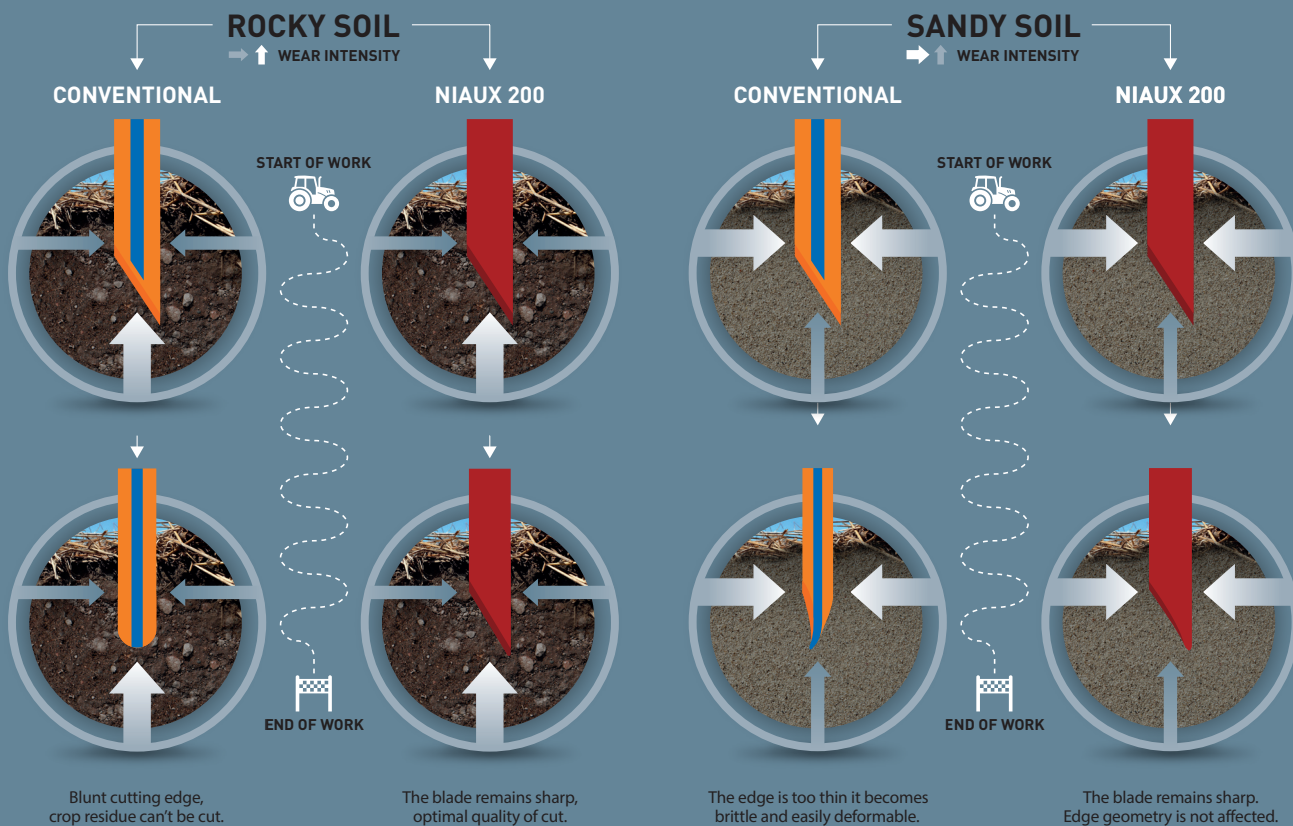

LOW

WEAR RESISTANCE SCALE

HIGH

- The presence of a less resistant zone inside conventional discs makes them more vulnerable to quicker and more uneven wear leading to blunt edges.
- The flawless steel structure and better wear resistance of NIAUX 200 Disc Blades allow them to remain sharp in any conditions.

As the discs are used in different challenging soil conditions the edge geometry can be affected preventing the disc from fulfilling its mission.

FOCUS ON THE WEARING PROCESS
